FEDERICA ORLANDI

*TA & Employer Branding
Senior Specialist*

A woman with long, curly, light brown hair is smiling and looking directly at the camera. She is wearing a dark, long-sleeved top. The background is a blurred office environment with modern decor, including track lighting on the ceiling, glass partitions, and other people working in the distance. A computer monitor is visible on the right side of the frame.

We need to be highly appealing
for young generations.

JAKALA is a data, AI,
and experiences company
that creates meaningful
and lasting impact.

Who we are

We are an artificial intelligence & data company.

- We don't sell generic models.
- We co-design tailored AI adoption paths.
- Our proprietary framework and AI Toolbox (20+ tools) enable faster time-to-value.

Data Scientist

Data Analyst

ML Engineer

AI Engineer

BOOKS AND NEWSPAPERS

A multi-dimensional approach

From isolated pilots to enterprise-wide transformation.

- Jakala integrates business, technology, and creativity to turn AI into a real growth lever.
- Our unique model bridges human and machine intelligence, ensuring measurable outcomes.
- We support clients across the full journey: from literacy to implementation, from data readiness to organizational change.

People centered by design

People Are the Platform.

- AI success = Tech x Skills x Culture
- We bring depth, speed and focus:
 - 150+ Data & AI professionals in Italy.
 - 15 PhDs.
 - 40+ cloud & data-certified professionals.

Data Scientist

Data Analyst

ML Engineer

AI Engineer

Governance & PMO

Technology savvy by design

Technology is the enabler.

- Cloud-native development across AWS, Azure, GCP
- Open architectures designed for flexibility and scalability
- Modular, composable stacks built on APIs and microservices
- Platforms for data, analytics, orchestration, and model management

Jakala combines deep technical capabilities with strategic alignment

Business driven by design

Our AI programs are designed for measurable outcomes — not just innovation theater.

Responsible by design

Committed to responsible and ethical AI practices.

Jakala has proactively aligned with the new regulatory framework and international standards by signing the AI Pact and working towards the ISO 42001 certification.

The AI Pact creates a direct channel with the EU Commission on AI compliance topics.

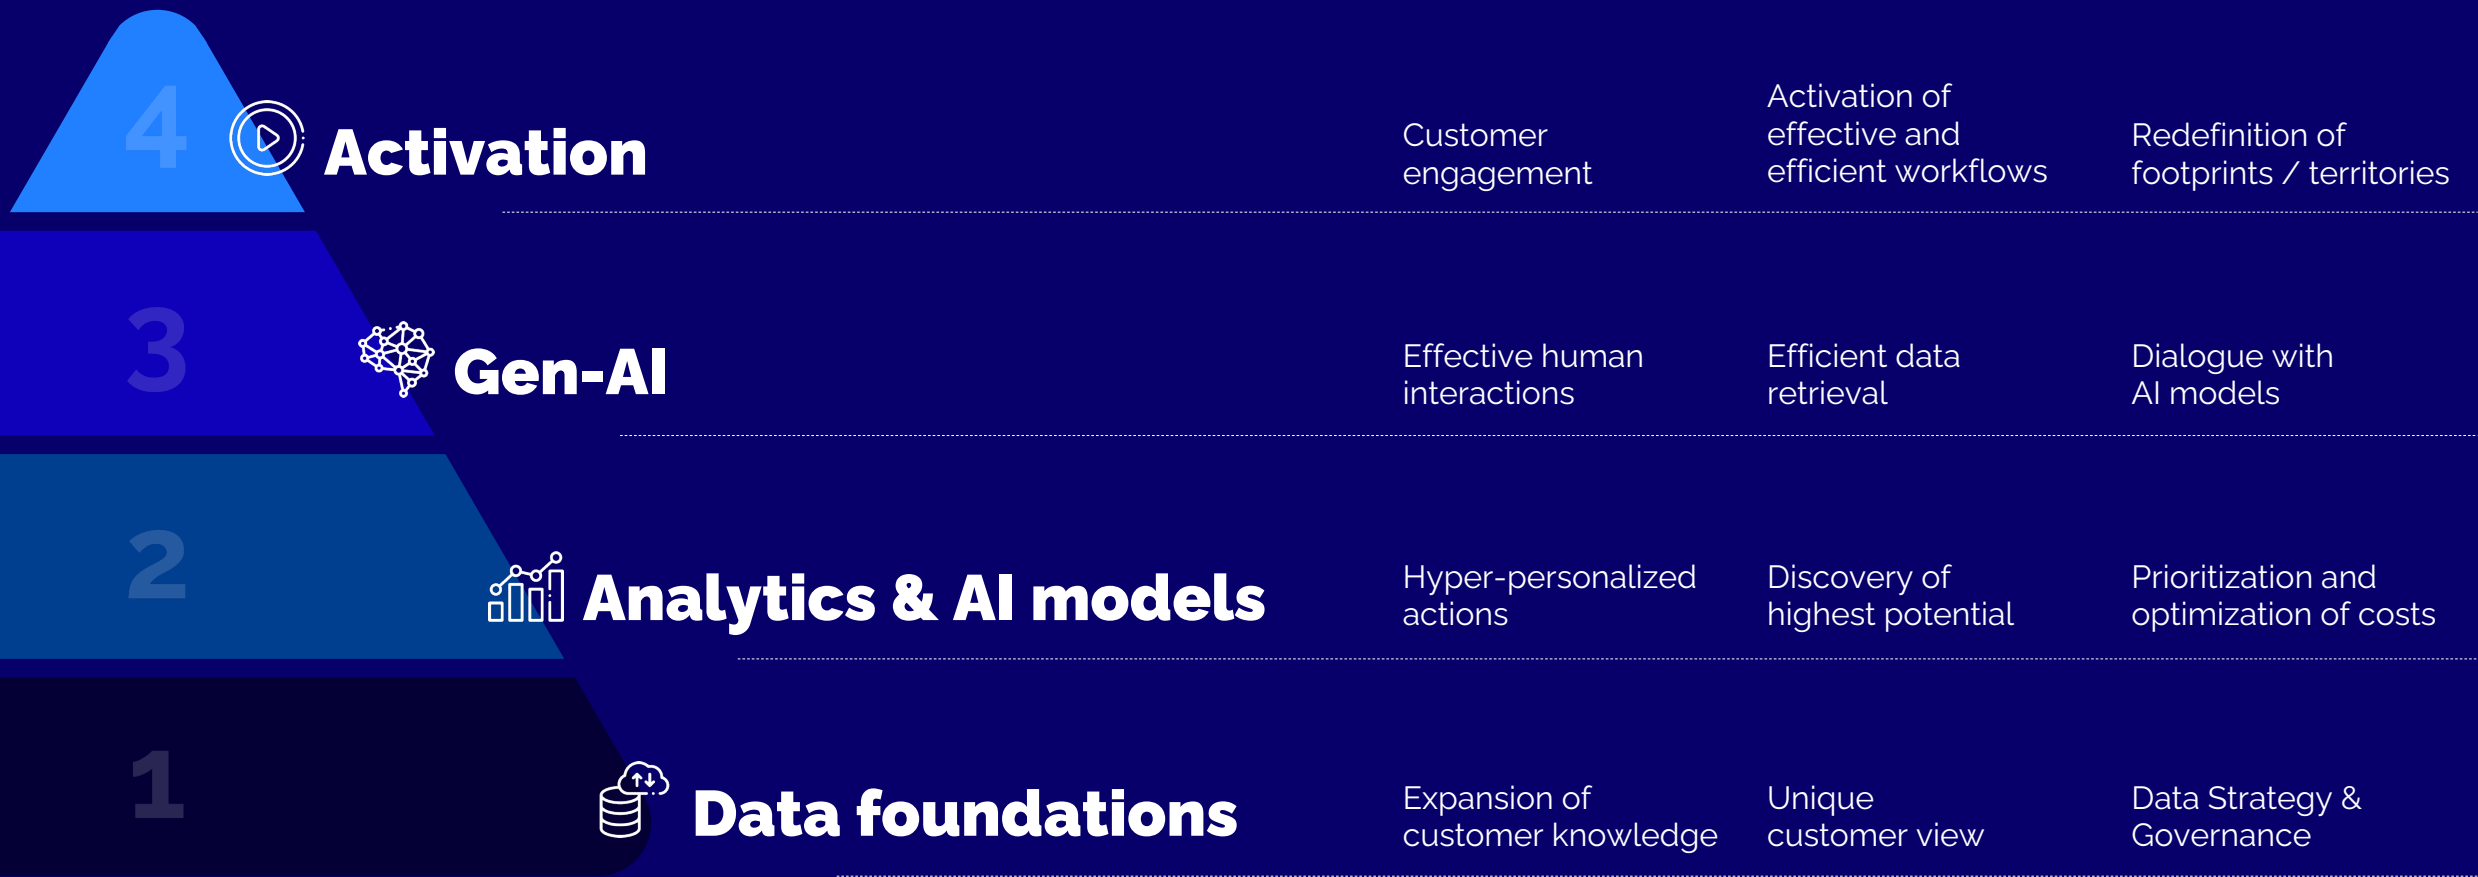

Jakala's center of excellence gathers many experts certified with the ISO 42001:2024.

Our vision: AI as a transformative tool.

Jakala AI approach

Benefits

CLIENTS' SUCCESS STORIES | DEALS ON FIRST GENERATION AI

We have implemented several **Data, Analytics and GeoAI projects with different clients** cross-industry. Here are some of the industries and areas for which we are implementing

Major Italian FSI Player	AI support for CRM developments in huge multi-years Program	Major Italian FSI Player	AI on geo-intelligence for gaining insights on customers and potential for sales agents
Telco European Leader	Analytics models for market potential estimation and development	Global Travel Leader	Analytics models for Marketing development
Major Payment Industry Player	Analytical support for CVM developments	Services Global Player	Geo-intelligence and analytics for logistics routing
Retail Multinational	Analytics models for Marketing development	Major Energy Italian Player	AI for audio recognition and speech analytics within voice order process
Italian Fashion Player	Data strategy and management, and Analytics models for CB anti-churn & evolution	Major FMCG Global Player	Geo-intelligence and analytics for sales field development

CLIENTS' SUCCESS STORIES | DEALS ON GEN-AI

We are already **delivering several Gen.AI PoC and projects with different clients** cross-industry. Here are some of the brands for which we are implementing

Telco European Leader

- Gen.AI multi-year transformation program within Customer Operations

Global Travel Leader

- AI for supporting Digital Transformation multi-years Program

Major Italian FSI Player

- AI consulting and use cases implementation (e.g. sales agent portal)

Major Media Italian Player

- Copilot newspaper Historical Archives

Major Italian FSI Player

- AI support (Document extraction & understanding within back-office)

Luxury Italian Player

- Copilot Social posting in compliance with Communication guidelines

Global Services Player

- AI on geo-intelligence and data for insight on LOD and consumer goods market

FSI Player

- AI on AML controls operations (computer vision on ID documents) and balance sheets

Major Italian FSI Player

- AI on VoC/Customer feedback, chatbot on pricing of factoring products

Manufacturing Italian Player

- AI learning course

Major Italian Education Player

- Gen.AI applied on HR documents and processes

Global Pharma Player

- Conversational Agent for insomnia suggestions

CLIENTS' SUCCESS STORIES | DEALS ON CONVERSATIONAL BI

Talk with your data

OVERVIEW

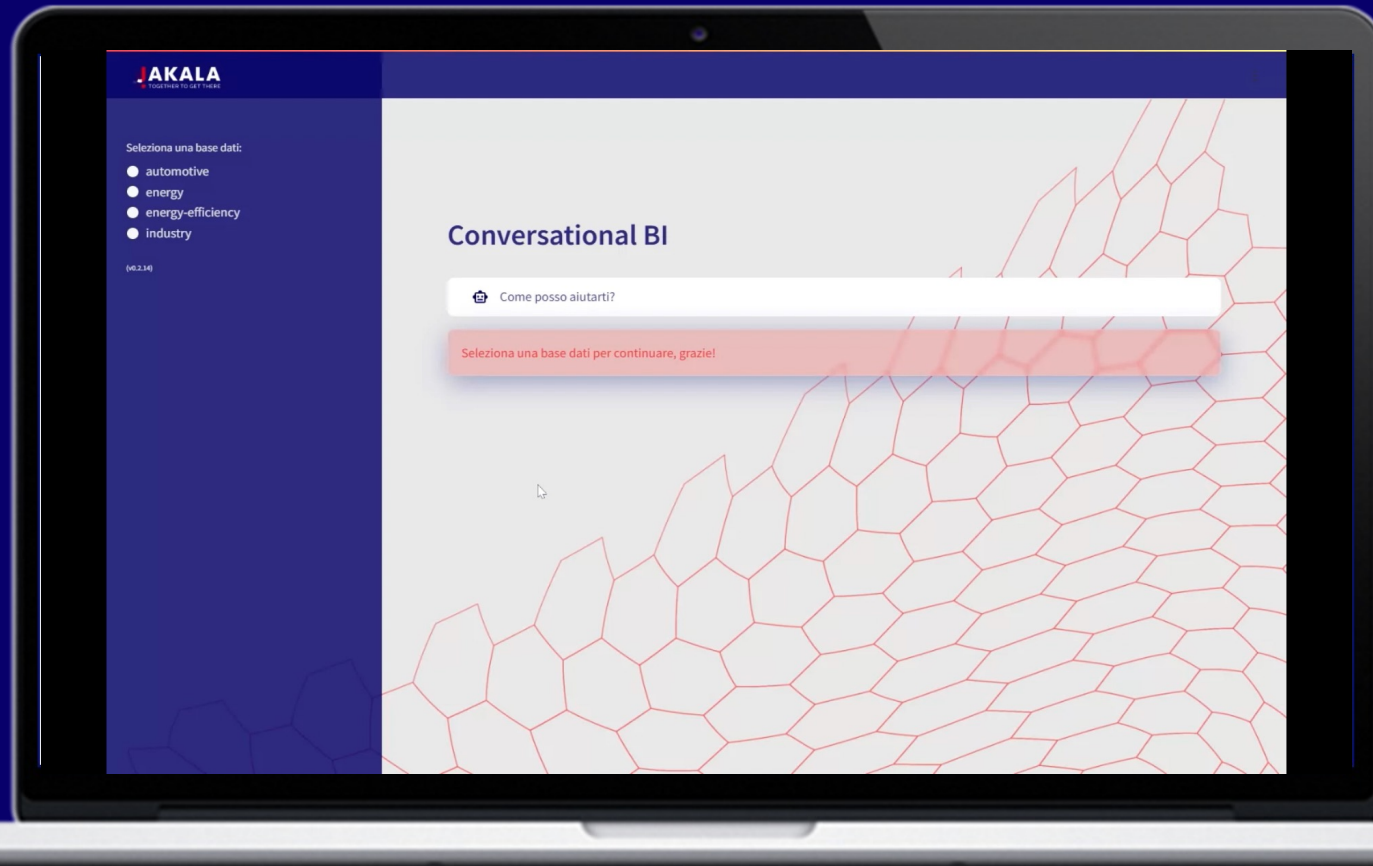

Conversational BI enables users to **explore and analyze business data through natural language interactions**. Instead of navigating complex dashboards, users can simply **ask questions and receive insights in real-time**. By understanding context and generating detailed responses, the **AI enhances decision-making, making data more accessible** across all levels of the organization.

BENEFITS

The platform **simplifies data analysis**, making business **intelligence intuitive and efficient**. Users can instantly access reports, uncover trends, and generate insights without requiring technical expertise. **By removing barriers to data exploration**, it accelerates decision-making, enhances collaboration, and **democratizes** access to critical business information.

KEY FUNCTIONS

- Natural Language Querying
- Automated Insights & Summaries
- Interactive Data Exploration
- Cross-Platform Integration

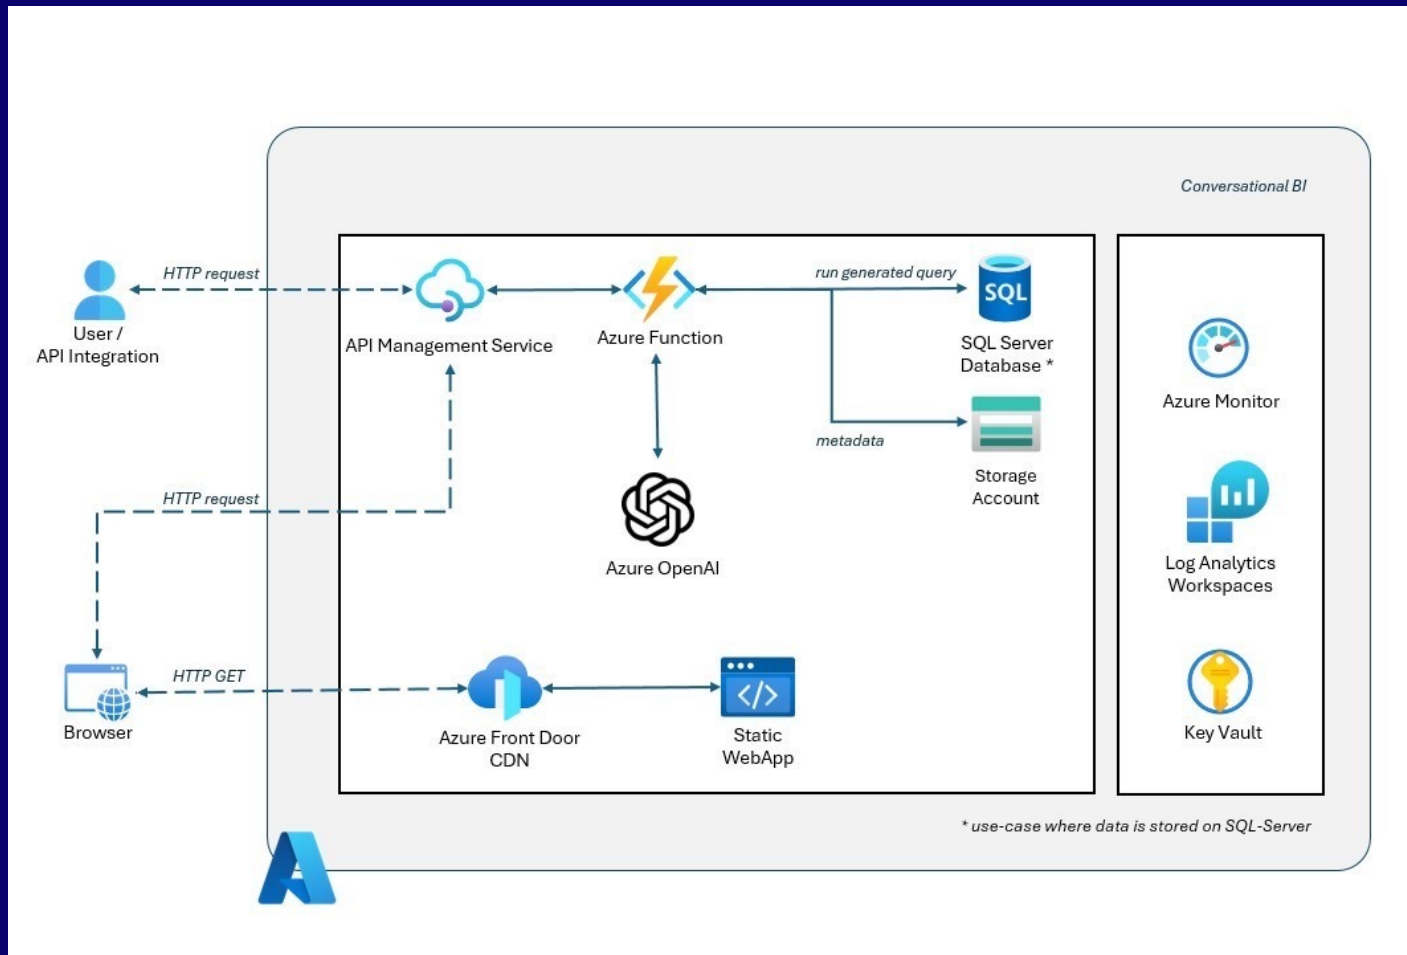

CLIENTS' SUCCESS STORIES | DEALS ON CONVERSATIONAL BI

Conversational BI Application Architecture

This example is an architecture based on **Azure Cloud services** (also portable to **other cloud hyperscalers**).

- Agent capabilities are exposed in a **single Azure Function**.
- The LLM is invoked through one or more **Azure OpenAI** instances.
- Data is stored on **DB and/or Storage** solutions

CLIENTS' SUCCESS STORIES | DEALS ON **LINKONTRO**

Cloud-Based Gen AI Platform for Event Data Insights Management

OVERVIEW

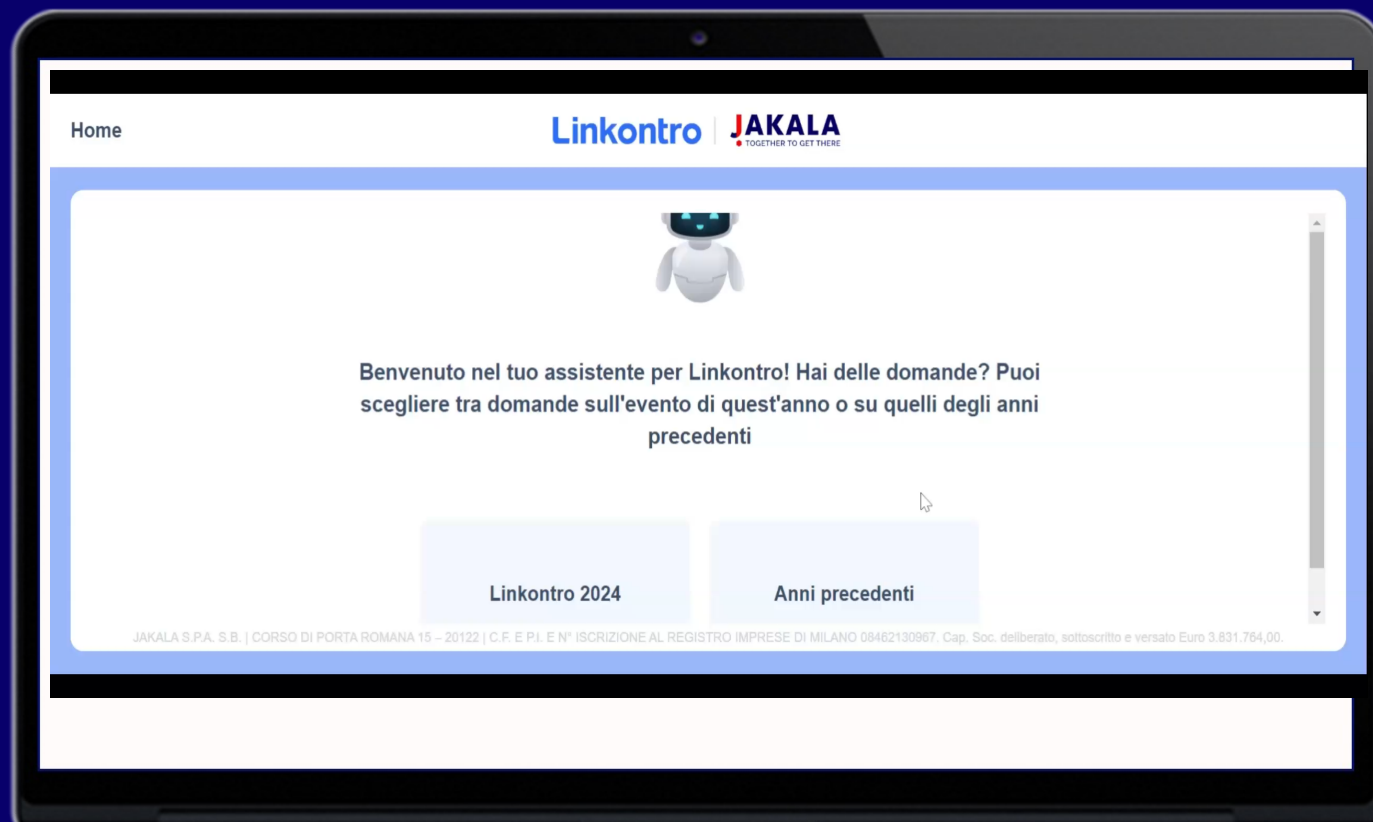

This Cloud-based GenAI platform helps **attendees access real-time and past event insights**. Through an AI agent, users **can retrieve information on ongoing sessions, speakers, and key discussions**, as well as past editions. Leveraging advanced text and video analysis, it ensures seamless access to relevant knowledge, enhancing engagement and participation.

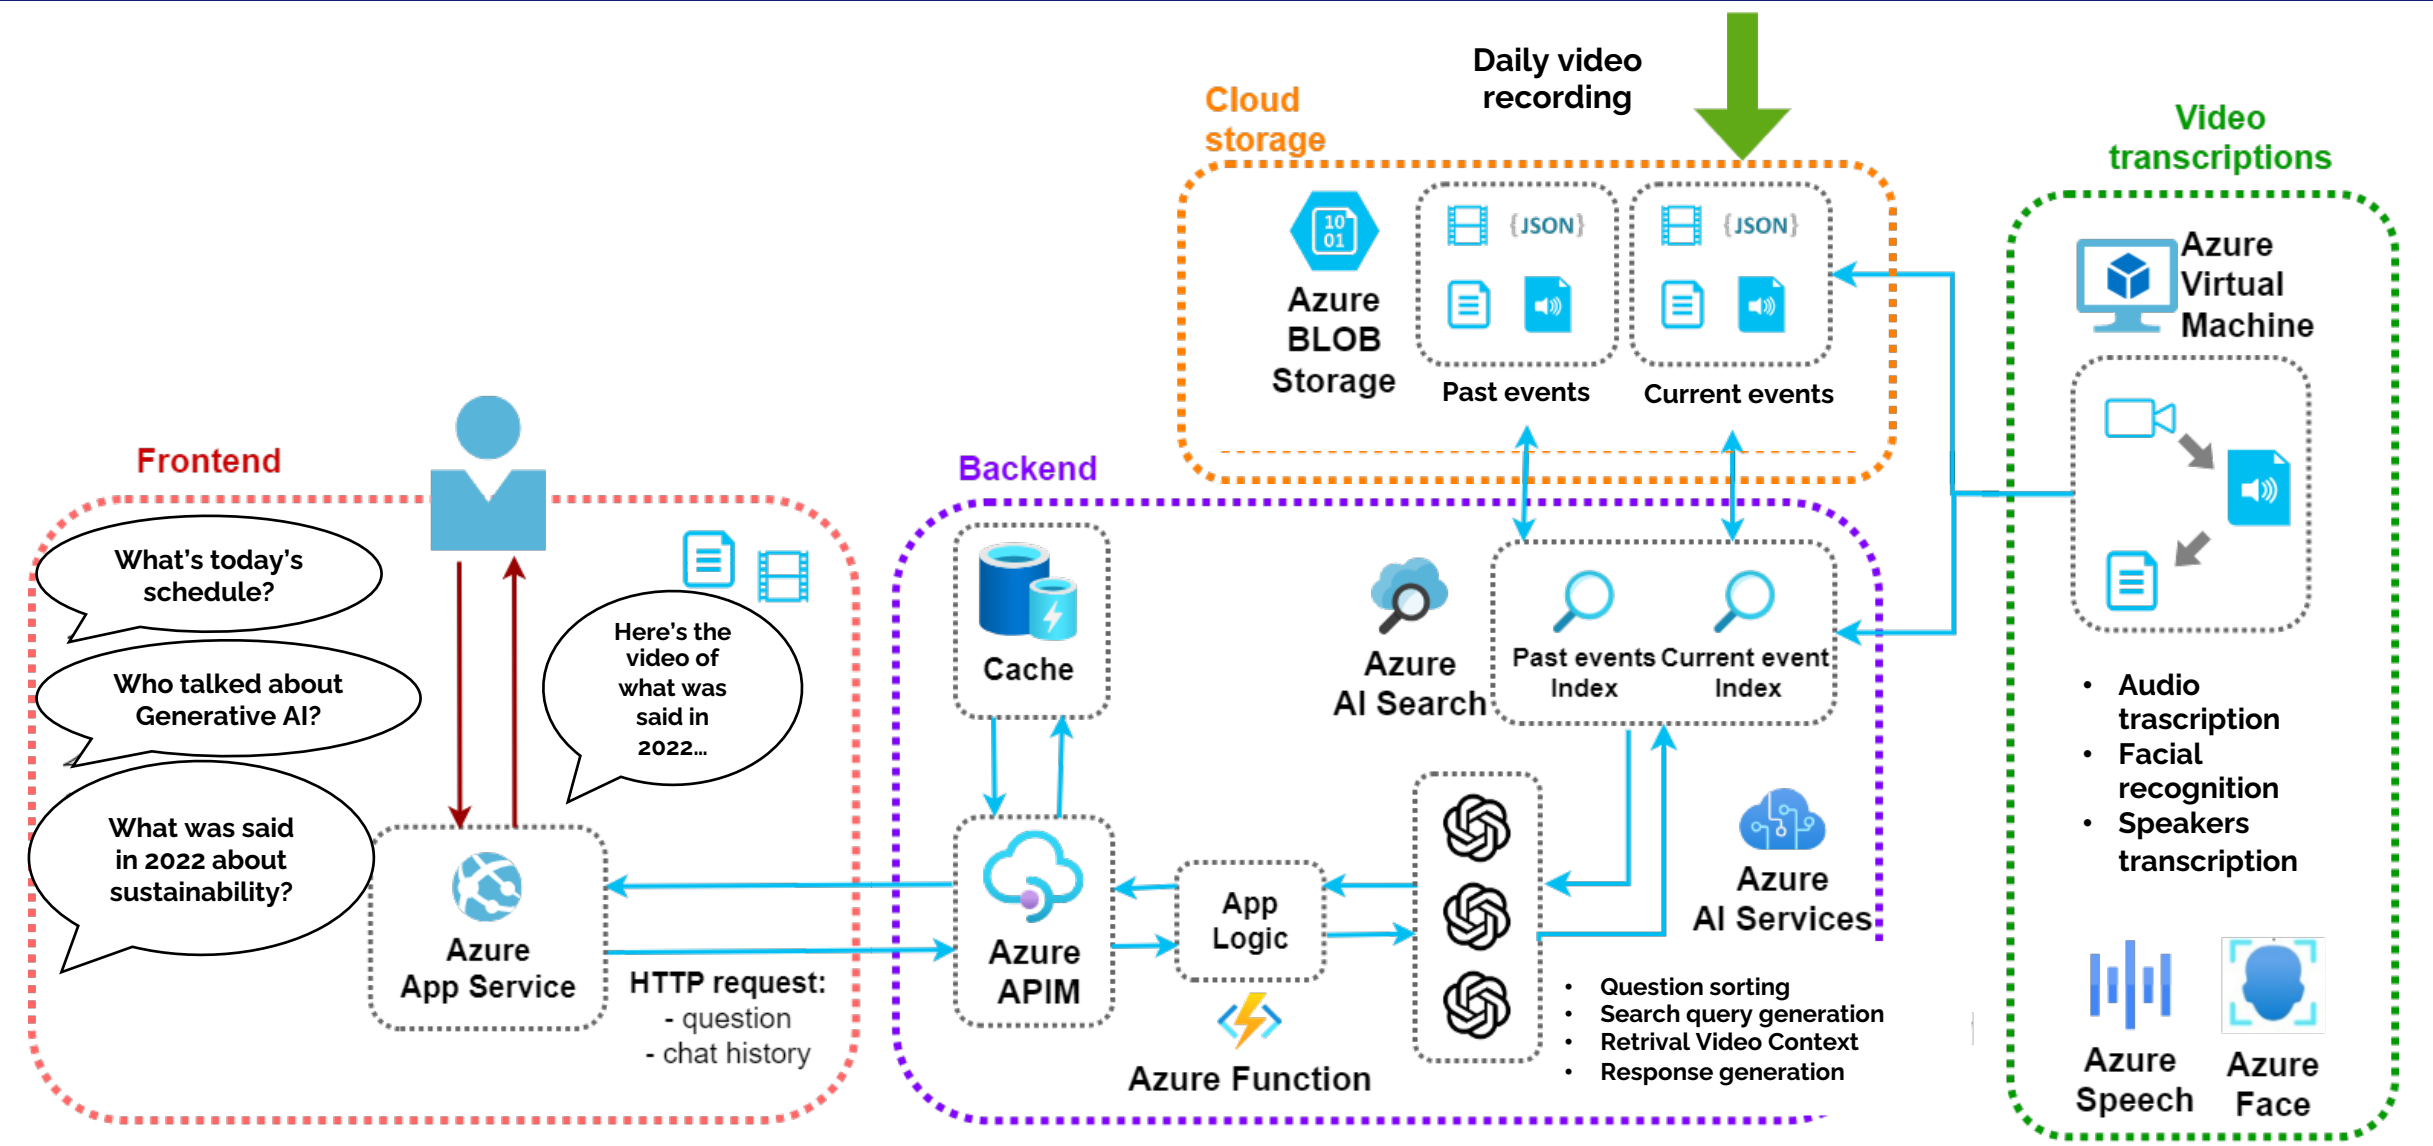

BENEFITS

The platform **makes event participation more interactive and insightful**. Attendees can easily find session details, track speaker contributions, and explore key topics. With AI-powered search, navigating agendas becomes **effortless, ensuring they never miss valuable content**. By providing historical data and real-time updates, it enhances engagement and enriches the event experience.

KEY FUNCTIONS

- Text and Video Data Analysis
- Extracting insights on topics discussed by speakers
- Identifying speaker participation and the specific event editions they attended

WELCOME

to the **ADVANCED ANALYTICS TEAM**

Join our 130+ talents to innovate and redefine the future together

PROJECT ONBOARDING

Meeting with the **project team**, including colleagues from **other business lines**, to explore and define the **project's objectives together**. You'll be involved from the **very beginning** in brainstorming sessions to **identify innovative solutions!**

DATA SCIENTIST'S HEART

The **beating heart of a data scientist's work**, through a **cyclical process**:

- **Preliminary analysis** and **discussions** to perfect the solution.
- **Developing code and models** to solve real challenges (hard coding).
- **Performance analysis** and **fine tuning**
- **Internal presentation** of progress!

RESULTS & PROJECT DELIVERY

Preparation and **presentation** of the **project results to the client**, with the official delivery of the implemented solution and **celebration of the success with the entire team!**

CONTINUOUS IMPROVEMENT

- **Embrace new challenges** with innovative projects, continuously improving solutions for the current client, and supporting new clients in a wide range of industries. **Engage in constant collaboration with senior colleagues**, learning from their expertise and experiences. **Contribute** to your continuous growth and success, and that of the team!

BEYOND PROJECTS

PERSONAL GROWTH

You will be accompanied by a **dedicated Career Advisor**, who will help you **set, monitor, and achieve personal and professional goals** through regular sessions and discussions

TRAINING

Access the best **training platforms, specific courses, licenses, exams, and certifications** to **enhance your skills and grow professionally** with us!

- **Tech partnerships** (e.g. Google Cloud, Amazon, Microsoft)
- **Executive courses & learning platform** (H-FARM COLLEGE, O'Reilly, Udemy)
- **Language & Soft Skill** (Speex, Maize, HR programs)

KNOWLEDGE SHARING

Join our **monthly knowledge-sharing meetings**, where every team member can present projects of interest and share their knowledge. It's a **unique opportunity to enrich our professional knowledge, share skills, and explore new topics together**, continuously growing and improving!

INFORMAL MOMENTS

Lunch breaks, coffee, and aperitifs to get to **know your colleagues better**, both professionally and personally. These informal moments **are perfect for building strong bonds** within the team and with colleagues from other business lines!

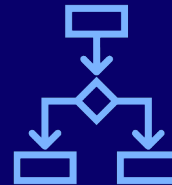

Bridging my academic background in Data Science and Management (LUISS) with professional practice at Jakala

MY FIRST MONTH IN JAKALA

TEAM INTEGRATION

- Meeting the Advanced Analytics team and understanding the department's **daily operations**
- **Integration into the JScience community and internal communication channels.**

STRATEGIC LOGIC

- Understanding the **business logic and decision-making** process before starting development.
- Analyzing **ongoing projects** to observe different technical approaches and innovative ideas.

TECHNICAL GROWTH

- Reviewing **existing code** with colleagues to understand professional implementation and logic.
- **Self-Study: Using non-project time to study programming languages (SQL/Python) and new technical concepts.**

JAKALA @LUISS/
AGENDA

LET'S GET TO KNOW EACH OTHER

ABOUT US

JSCIENCE

BUSINESS CASE

LET'S KEEP IN TOUCH

Customer Segmentation

Fashion Retailer Company

Customer Segmentation

Context and Objectives

CLIENT

Large Fashion **Retailer** selling **clothes and accessories**

BUSINESS GOAL

Gain **deep insights** into the customer base and identify **distinct customer segments** to understand key archetypes. Segments should be defined taking into account purchasing patterns, customer profiles and behavioral characteristics to enable **targeted marketing strategies** and maximize engagement and retention

PROJECT GOAL

Develop a cluster analysis model to group customers into **meaningful segments** and profile each cluster with **clear characteristics and actionable recommendations**

Customer Segmentation

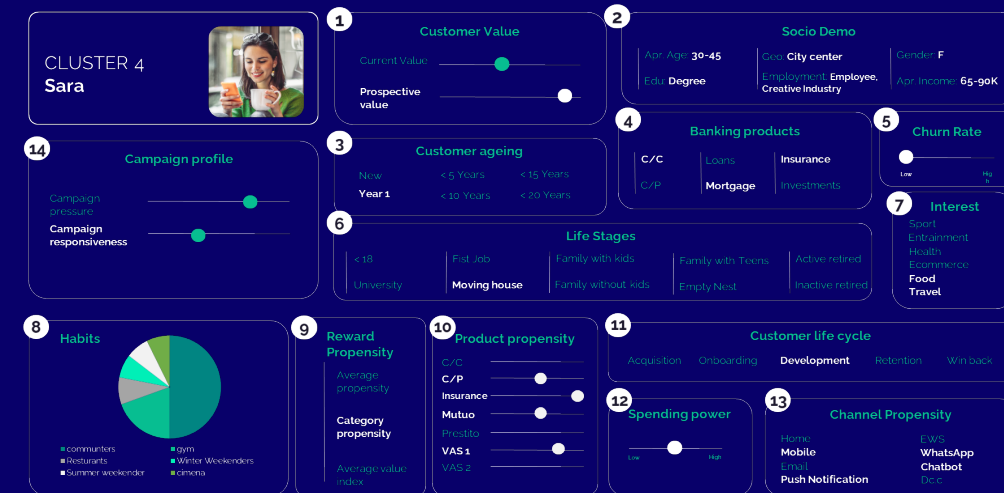

Gain a better understanding of your customer base

Customer Segmentation uses **advanced clustering** techniques to discover natural groupings within customer base. By analyzing behavioral patterns, transaction histories, and customer attributes, segmentation **reveals hidden structures** in data, transforming a heterogeneous customer base into manageable, actionable groups that can drive strategic decisions.

Actionable business benefits

- **Understand who your customers are** by revealing clear customer archetypes and their key characteristics, helping stakeholders visualize the diversity of the customer base
- **Prioritize high-value segments** identified through the analysis, in campaigns and loyalty programs dedicated to the most profitable or promising customer groups
- **Personalize marketing strategies** by tailoring communication, offers, and product recommendations to each segment's specific needs and preferences
- **Optimize resource allocation** by focusing marketing and commercial efforts on segments with the highest potential for growth and retention

SEGMENTATION EXAMPLES OUTPUT AND DATA

Loyal High Spenders

Brand Ambassadors

Discount Seekers

Customer Segmentation

Project approach

Every Data Science project is made up of different stages

- 1. Business Understanding:** analyze the business need, define the key indicators of success and find the correct approach for the specific need
- 2. Data Understanding:** quantitative and qualitative analysis of available data to acquire the necessary knowledge of the available information and metrics
- 3. Data Preparation:** development of the input features necessary to build machine learning models
- 4. Modeling:** training of the model(s), in a way that is closely connected to data preparation; Model features usually need to be refined during the modeling process
- 5. Evaluation:** evaluation of the predictive capacity of the model(s), i.e. the ability to generalize to new data in order to evaluate its robustness and stability
- 6. Deploy:** Activate the model on production systems for actual use. This phase deals with industrialization and implementation in the production environment, its maintenance and monitoring.

Customer Segmentation

Business Understanding

Deeply understanding the business need is fundamental. But in clustering, it's even more critical: statistical indicators can tell you if clusters are well-separated, but they can't tell you if they're useful. **The key question is: are the characteristics that differentiate the groups actionable for the business?**

The company wants to **identify distinct customer groups** to understand who their customers are and tailor marketing strategies accordingly. With segmentation, they can move from a one-size-fits-all approach to targeted, data-driven initiatives.

Sample Questions to Define the Segmentation Strategy

What is the primary goal of segmentation?

Understanding customer diversity to enable personalized marketing, improve retention, and optimize resource allocation across different customer types.

Who do you think are our customers? What archetypes exist?

Are they loyal high-spenders? Occasional buyers? Deal-seekers? New customers with growth potential? Identifying these archetypes helps stakeholders visualize and act on customer diversity.

What variables define meaningful segments?

Behavioral metrics (purchase frequency, recency, monetary value), product preferences in terms of product category and high/low value, channel usage, customer tenure, demographic attributes, marketing interactions....all contribute to building robust, actionable segments.

How will segmentation drive business decisions?

Segments should translate into concrete actions: targeted campaigns, differentiated customer experiences, personalized offers, optimized communication strategies, and tailored retention programs.

Customer Segmentation

Data Understanding

The company is **collecting** data about its customers and their behaviours, thanks to a CRM program kicked off years ago.

In particular 4 main data sources were considered

ILLUSTRATIVE

ANAGRAPHICS

1 row per customer

Personal and contact Details**

ID	Gender	Date of Birth	Province code	Province	Subscription_date
CG-12520	M	01/01/1999	MI	Milano	01/01/2025
CG-12521	F	01/01/1998	RM	Roma	01/01/2024

TRANSACTIONS

Every purchased item by every customer, including returns

Multiple rows per customer

Cust ID	Date	Store ID	Product Id	Quantity	List Price	Discount %	Amount Spent
CG-12520	01/02/2025	SA	FUR-1	1	1.000	20%	800
CG-12520	01/12/2024	SB	FUR-2	2	1.500	0	3.000

PRODUCTS

Details about products

1 row per product

Product ID	Category	Subcategory	Gender
180000	Bottoms	Skirts and Shorts	Woman
190000	Tops	Shirts	Man

MARKETING CAMPAIGNS

Every interaction with newsletter emails marketing campaign (email opened, clicked..)

Multiple rows per customer

Cust ID	Date	Email ID	Opened	Clicked
CG-12520	01/11/2024	E1	Y	Y
CG-12520	01/12/2024	E2	N	N

** personal and contact information (name, surname, email, telephone) have not been shared for privacy reason, but you can assume they are available

Customer Segmentation

Data Understanding

We provide files containing events from March 2023 to February 2025.

4 .txt file pipe ("|") separated:

- Customers
- Transactions
- Products
- Marketing Campaigns

Data

See xls file for variable description and sample files

It's your turn!

Create the **features you think are most useful to describe customers and segment** them.

In the end you should have a customer table, a table with one row per customers containing all relevant features

And remember, some features can be **used in the clustering algorithm**, and some others can be **used just to describe the clusters** once created

And don't forget about data quality, outliers...

Example features:

- *Total amount spent*
- *Total number of purchasing acts*
- *% spent on different categories*
- *Avg Price*
- *....*

It's your turn again!

Run clustering algorithms and define what's the best solution according both to statistical KPIs and to business interpretation of segments

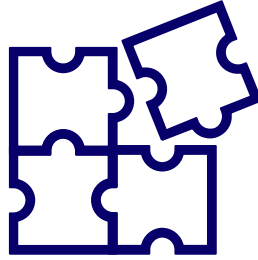

It's your turn again!

Describe the solution, both from a statistical and a business point of view

How can you describe the clusters created? Can you give them a fancy name? What are the main characteristics? What business strategies can you define for each of them?

JAKALA EVALUATION CRITERIA

To ensure a comprehensive and fair assessment of the project, Jakala has defined **5 areas** that reflect key aspects of the required skills and capabilities.

1

TEAMWORK & PROBLEM SOLVING

Ability to address and solve unforeseen problems, flexibility and adaptability, effective collaboration, and communication among team members.

2

TOOLS, TECHNOLOGIES & METHODS USED

Effectiveness in using the available tools and analytical technologies, and the proficiency demonstrated during the project.

3

INNOVATION & CREATIVITY

Originality of the proposed solutions and the ability to think outside the box to propose innovative ideas.

4

BUSINESS CONTEXT APPLICABILITY

Analysis of the feasibility of the solutions in the business context and the possibility of concrete implementation in the real business.

5

PRESENTATION & COMMUNICATION SKILLS

Assessment of clarity, professionalism, logical structure, and coherence in the presentation of the results.
